

Rapid Cooling & Fast Pain Relief from Burns?

- Burnaid provides effective treatment and fast relief from the pain of burns.
- Burnaid rapidly cools the burn – minimising tissue damage and aiding the healing process.
- Burnaid provides a sterile barrier against contamination.
- Burnaid's water based non-toxic gel is water soluble and can be readily rinsed off should further medical treatment be required.
- Burnaid contains natural antiseptic (Melaleuca Oil) – the best of science and nature.

Cooling

Clinical trials demonstrate that Melaleuca Oil (Tea Tree) hydrogel dressings are as effective as cold water in cooling a burn and increasing the rate of wound healing ¹. Burnaid is easy and convenient to use and unlike water stays in place on the burn and keeps cooling without repeated application.

Pain Relief

Melaleuca Oil's anaesthetic properties help provide rapid pain relief ². Unlike water Burnaid provides ongoing pain relief.

Prevents Infection

Melaleuca Oil is an effective antimicrobial agent that can help prevent secondary infection ³.
